SECURITY HORIZON, INC. PARTNERS WITH BLACK HAT AND NATIONAL SECURITY AGENCY TO OFFER INFOSEC TRAINING

Security Horizon, Inc. announced today that it will again teach the National Security Agency's INFOSEC Assessment Methodology (IAM) training at the Black Hat Security Briefings, July 29th – July 30th, in Las Vegas, Nevada.

Under the new agreement, Security Horizon instructors will offer the same training that recently received high marks by students during the Black Hat Windows Security Briefings in New Orleans, February 5th – 6th. “Because of the response we received in New Orleans, we’ve decided to offer two courses in parallel if the first course fills up as expected”, says Russ Rogers, CEO and President of Security Horizon, Inc.

An NSA representative was the keynote speaker for Black Hat in New Orleans and highlighted the desire of NSA to continue working with public agencies to advance security in an increasingly networked world. The IAM training, which is part of this program, is based on sound procedures for conducting security assessments. “Most of the comments we’ve received thus far highlight the fact that a standard methodology like IAM has been absent from the market and that IAM is easily adapted for use in their companies”, says Mr. Rogers.

About Security Horizon, Inc.

Security Horizon was founded in the year 2000 by information security professionals dedicated to quality security practices founded in experience, integrity, and education. The overall experience of Security Horizon, Inc. spans both the commercial and federal business sectors. Most of the individuals have held high-level security clearances with the US Department of Defense, to include the National Security Agency (NSA), Defense Information Systems Agency (DISA), and Department of Defense (DoD) military branches. The company also has experience working for clients in the Educational, Financial and Business arenas.
