Popularity for the National Security Agency's INFOSEC Assessment Training Course Increases Dramatically

Security Horizon, Inc. announced today that it is receiving an increasing number of requests to hold the National Security Agency's INFOSEC Assessment Methodology (IAM) training in venues around the country.

Under a Cooperative Research and Development Agreement (CRADA) with NSA, Security Horizon teaches the IAM training to individuals who work in the computer and network security fields. But what started out as a seemingly slow process to share the methodology with commercial firms has apparently taken off and requests are starting to come in larger numbers.

"We expected consistent work from these courses, but what we're finding out is that the security community, as a whole, is looking for a standard for performing these security assessments.", says Russ Rogers, CEO for Security Horizon. "The feedback we're getting indicates that many companies and individuals are integrating the NSA methodologies into their own assessment process."

During the recent TechoSecurity conference in Myrtle Beach, SC, Security Horizon received requests for up to an additional 12 IAM courses this fiscal year alone.
